

DAYCO® GOLD LABEL®
Poly Cog® Belt

Meets or exceeds SAE J1459
and SAE J1596 Specifications

Designed for diesel engine drive system accessory drives. This “diesel engine grade” belt features more polyester cords per inch than Dayco’s conventional Poly Cog Belt to meet the higher torque and power pulses exerted by today’s diesel engines. These specially treated cords resist stretching and ensure the length stability essential for the correct tensioning between drive system components. Computer designed cog placement eliminates harmonic squeal while the serpentine belt’s heavy-duty construction provides additional integrity without sacrificing flexibility or belt-to-pulley compatibility. Dayco’s Gold Label Poly Cog Belt’s high-grade engineered polymer construction is specifically compounded to resist the heat and harsh under hood environments experienced in over-the-road and off-road conditions.

Poly Cog® Belt

DAYCO®

Meets or exceeds SAE J1459 and SAE J1596 Specifications

Designed for power transmission on multiple-accessory drives. The multiple rib design of the Dayco Poly Cog Belt provides better belt-to-pulley contact for less slippage, providing longer life than conventional V-belts. These multiple ribs also eliminate the need for matching and allows “controlled slippage” in shock load situations. The belt’s transverse groove design runs cooler and reduces rib cracking in addition to providing flexural stress relief for increased flexibility in both normal and backside bending. Dayco’s superior manufacturing technology uses rubber backing that maximizes load-carrying capability and specially formulated cord treatment for length and tension stability.

DAYCO® GOLD LABEL®
Top Cog® Belt
 (Laminated Construction)

Meets or exceeds SAE J1459 and SAE J1596 Specifications

Designed to deliver extended life in demanding diesel applications. Dayco's Gold Label Top Cog Belt is the workhorse of the heavy-duty industry. The cogs in the top of the belt deliver increased flexibility around small pulleys and the increased surface area results in a cooler running belt. Polyester cord provides maximum power transfer and tension holding capability for the life of the belt. The belt's laminated construction helps absorb the greater shock loads associated with diesel engines.

DAYCO® GOLD LABEL®

Top Cog® Belt (Bottom Cog Construction)

Meets or exceeds SAE J1459 and SAE J1596 Specifications

Designed for heavy-duty applications requiring smaller diameter pulleys. The increased flexibility obtained through bottom cog technology makes this Dayco Gold Label Top Cog Belt the most flexible heavy-duty V-belt available. The belt's raw edge construction maintains a gripping action to eliminate belt slippage and to deliver maximum power on smaller diameter pulleys. Additionally, the combination of top and bottom cogs offer extreme flexibility and longer service life while polyester cord provides maximum tension for the life of the belt.

DAYCO®

Top Cog® Belt

**Meets or exceeds SAE J636
and SAE J637 Specifications**

Designed for power transmission to vehicle accessories. Dayco's innovative raw edge sidewall construction, which contributes to controlled slippage around pulleys, combined with Dayco's patented cogged top design ensures superior performance. This unique belt profile delivers more flexibility and increases airflow around the belt which allows it to run cooler and last longer than most competitive belts. Three plies of impregnated fabric resist heat, oil and grease and a specially formulated treatment of the polyester cord provides additional strength, stability and reliability.

DAYCO® GOLD LABEL® No Slack® Heavy Duty Automatic Belt Tensioner

Specified as Original Equipment on over 90% of domestically manufactured heavy-duty vehicles.

Designed for heavy-duty diesel engine accessory drive applications. As the major supplier to heavy-duty original equipment manufacturers, Dayco guarantees that its line of Dayco Gold Label Heavy Duty Tensioners are engineered and manufactured to the strictest design specifications. The heavy-duty cast aluminum body and pulley arms translate into extra strength and durability. Our patented "flat spring" design is engineered to handle the higher torque and power pulses exerted by today's diesel engines while rugged pulleys with double lifetime-lubricated bearings deliver long lasting, dependable service. All Dayco Gold Label Heavy Duty Automatic Belt Tensioners feature high levels of damping to minimize rapid arm movement common to diesel engine applications.

DAYCO® No Slack® Automatic Belt Tensioner

Passenger car, light truck and van serpentine belt drive applications engineered from OE heavy duty technology.

Designed to maintain constant tension on serpentine belt drives. Dayco's No Slack Automatic Belt Tensioner line encompasses an extensive selection of "flat spring", round spring and hydraulic aftermarket tensioner replacements—all specifically engineered and matched to meet the critical OE drive system design criteria for a particular vehicle's make, model and year. Typical component materials include high-grade spring steel, die cast aluminum and engineered resins.

DAYCO® GOLD LABEL® No Slack® Heavy Duty Idler/Tensioner Pulley

“Built for punishment”..engineered to meet or exceed OE requirements.

Designed for heavy-duty diesel serpentine and V-Belt drive applications. The performance demands of original equipment manufacturers of over-the-road equipment require “built for punishment” heavy duty construction. That’s why, to deliver wear resistance under harsh environments, Dayco Gold Label Heavy Duty Pulleys are manufactured from steel, powdered metal or engineered polymer materials. To provide long life, despite the shock loads experienced in diesel engine applications, these pulleys feature double pressed-in bearings and retainers.

Fleet Belts, Tensioners & Pulleys

DAYCO® No Slack®

Idler/Tensioner Pulley

Advanced technologies ensure drive system performance.

Designed for light truck, van and passenger car serpentine and V-Belt drive applications.

The use of state-of-the-art 3-D computer aided design and finite element analysis guarantees the optimal design and maximum structural integrity for both Dayco engineered polymer and steel pulleys. The manufacture of pulleys with advanced material composition, smoother surfaces and tighter dimensional tolerances translates into high strength, wear resistance, less vibration and longer belt life. Lifetime lubricated ball bearings and double high temperature seals assure peak bearing performance.
